MODE MACHINES PS-1

The PS-1 Popkiller (pop filter) of the german manufacturer MODE MACHINES provides with a diameter of Popfilters of 15 cm and a flexible arm (35 cm length) a flexible and adjustable pop filter. The integrated clamp of the PS-1 can be easily attached to any microphone stand and the user can adjust the position by the screw quickly and flexibly. Typically, a pop filter is used in a recording studio. It is used to reduce or eliminate fast-moving air in front of a microphone (not included). Also, the PS-1 Popfilter holds the respective microphone from moisture and protects the microphone. Clicking & Plopping sounds and also sibilant and explosive lutes as P, T or K get attenuated.
